

The netClé Project

In 2019, Tetra Society of North America received funding to build and bring to market an affordable and customizable device that makes using a computer more accessible for users with mobility challenges. The netClé device was created to fill this need, whether in someone's home, their work-from-home office, or the workplace.

What is netClé?

netClé (pronounced net-clay). netClé is a user-friendly, customizable device that enables people with a range of mobility limitations to independently operate a computer.

netClé is a programmable hub with a wide range of customizable peripherals (buttons, switches, etc.) that serve as alternatives to standard inputs like a keyboard and mouse.

These can be used by those without dexterity or strength to use a mouse or those without the ability to reach a mouse or laptop's track pad on a desk,

Pictured (left to right): netClé hub, dual touch sensor, mini touch sensor, standard touch sensor, gyroscope, mini joystick, large joystick.

What can netClé do?

netClé can perform a wide range of computer functions: move the mouse cursor

left and right click, scroll, drag & drop, and more! It can be operated using one or a combination of switches, sensors, joysticks—even a gyroscope!

COVID-19 Response

netClé is installed remotely to ensure compliance with social distancing guidelines.

Users interested in remote installation must have a friend, family member or caregiver who can provide assistance (if needed) to unbox and assemble the unit when it is delivered.

What does netClé cost?

netClé is currently being distributed for free across Canada to help increase internet accessibility at this critical time.

To receive a netClé unit, the user must agree to provide feedback about their experience with the device.

The Tetra Society of North America is a member of Presidents Group's Community of Accessible Employers. Tetra is a charitable society dedicated to assisting people with disabilities to achieve independent and fulfilled lives. With 30 chapters across North America, Tetra is powered by skilled volunteers who work one-on-one with people to create customized solutions for each individual and their needs. Solutions created for their clients often satisfy a need that could not be commercially filled or was cost prohibitive.
